Connecting WIFI Dongle to Nor150

1. Make sure the Nor150 is turned off and insert dongle into the USB port of the Nor150.

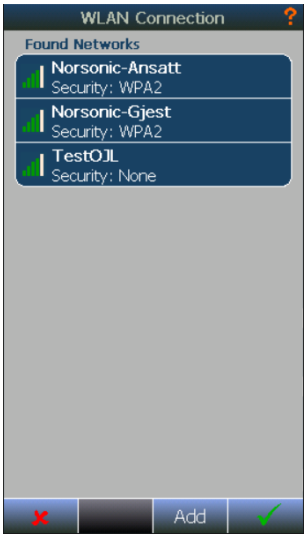

2. Press the SETUP button and navigate to *Instrument* > *Communication*>*WLAN*

3. Find the network you want to connect to from the list of available networks and if needed, enter the password for the network.

Using NorVirtual App to Control Nor150

1. Download and install the NorVirtual App for your Android or Apple smartphone from Google Play/Apple Store.
2. Activate the Hotspot mode on your smartphone. This will enable your device to create a local network.
3. Follows the steps from previous section to connect the Nor150 to the hotspot network created by your smartphone.
    a. Make a note of the IP address as shown under the WLAN connection menu (ex. 10.183.119.37)
4. Open up the NorVirual App and click on *Connect Device*.

5. Enter the IP address from step 3a and press *Connect*. The NorVirtual app will mirror the display of the Nor150, allowing user to control the analyzer using NorVirtual.
